#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lay US 6,302,132 in view of Erickson US 5,606,992.

Lay discloses a tapping valve constructed as a ball valve 120 having a valve housing 130 with an inlet connection connectable to a liquid container (suggested use) and an outlet connection 130 that is welded to a male part of a quick disconnect coupling 140 (seen as a male part as there is not a female part claimed and anything can be considered quick disconnect) for connecting a discharge hose (suggested use) with the valve housing and coupling made of high density polyethylene (col. 5, lines 28-35 and col. 6, lines 49-52). Lay lacks the polyethylene of the coupling being reinforced with glass fibers. It would have been obvious to one having ordinary skill in the art at the time the invention was made to make both the valve housing and coupling of Lay as glass fiber-reinforced as taught by Erickson in order to make both pieces stronger and the glass provides rapid crystallization during the molding process. The outlet connection is seen as having a reduced diameter portion compared to the outer diameter of the entire valve.

Art Unit: 3751

***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ottens discloses a polyethylene valve and coupling welded together. Paitchell, Shafer, and Kieper disclose valves with welds connecting housings and couplings. Rozek, Akoi, and Prescott disclose glass-fiber reinforced polyethylene. Holt discloses a quick disconnect coupling with a weld.
